

Do we do a web or app.

Dillon - Web

Felix - App

James - App

Elliott - App

Felix:

Task 1 : Add an Expense.

Task 2 : Viewing Expense History

Task 3 : Splitting Bills with Roommates

Dillon:

Task 1 : Adding a new shared expense.

Task 2 : Marking an expense as paid

Task 3 : Review payments received.

James:

Task 1 : Add an Expense.

Task 2 : Creating a group.

Task 3 : Adding a Friend.

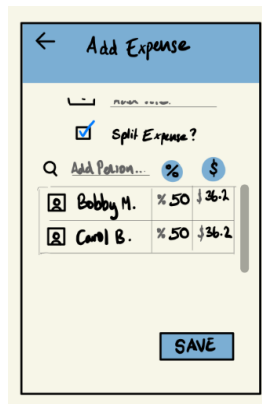

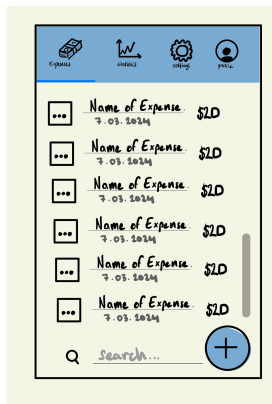

Elliott:

Task 1 :

Task 2 :

Task 3 :

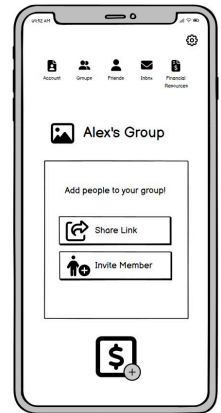

Style:

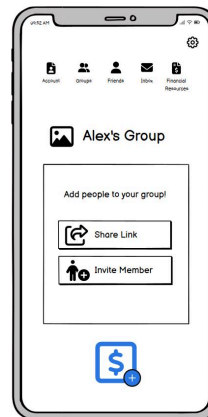

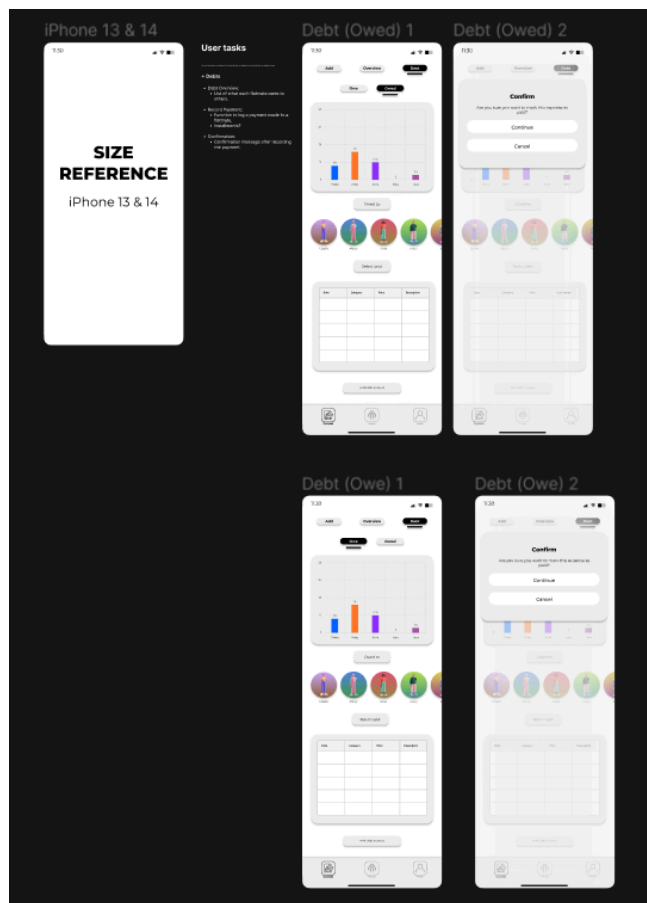

Opening home screen after first login

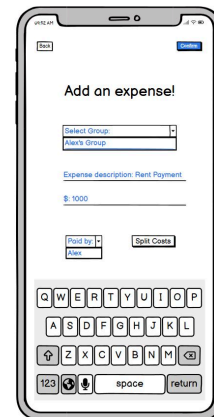

The create group page

The group home page for the newly created group

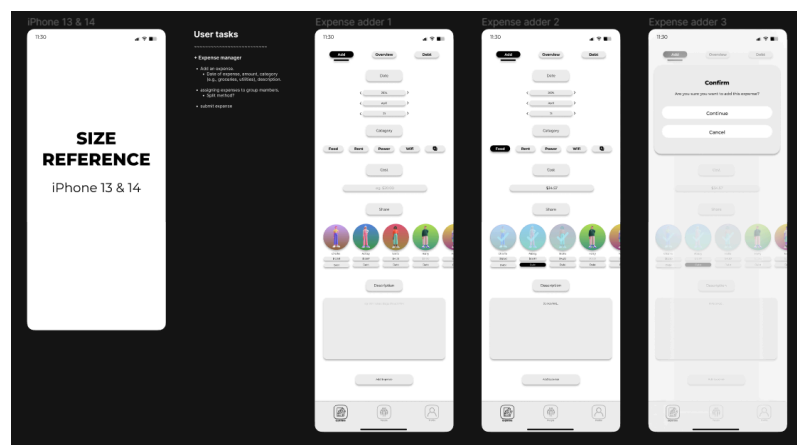

The group home page

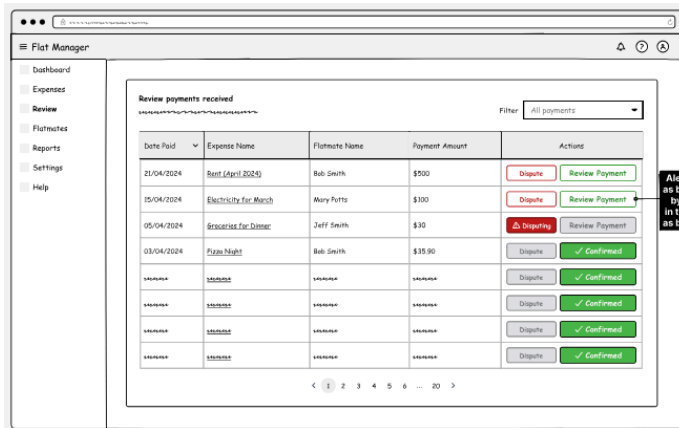

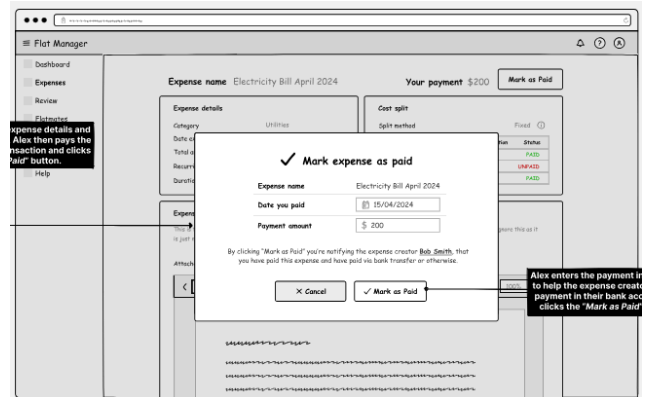

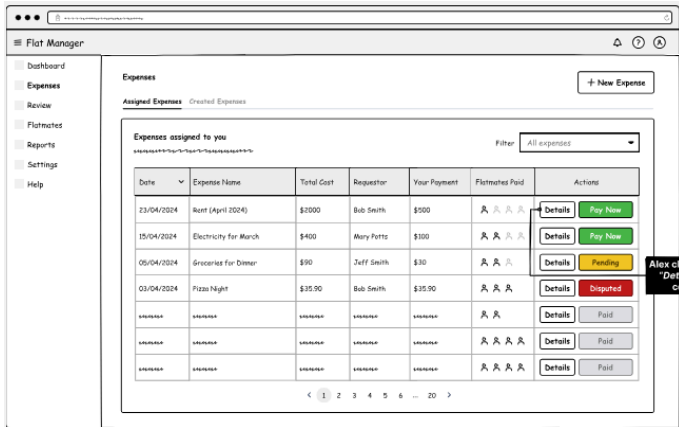

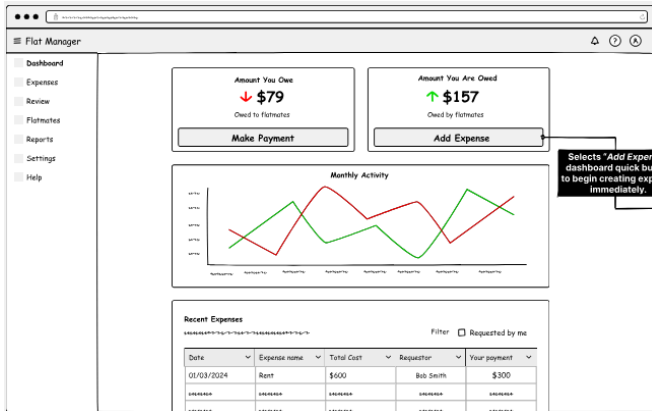

The add expense page

The group home page with the newly added expense

In figma, have a page dedicated to the design of the app and another page where we work on the workflow of each task.

Combining all the tasks that we have that are the same/overlap, picking the best features from each design (ie Adding an expense).

And then nitpick the outlying tasks and decide which ones we want to implement discussing parts of the feature to fit with the rest of the app.
